

BLACK NEOPRENE FOAM TAPE WITH THREADED ADHESIVE

Short Description (Beside Product Image)

Black neoprene foam tape with threaded adhesive backing designed for sealing, vibration dampening, insulation, and gap filling in industrial, automotive, HVAC, and construction applications. Manufactured from high-quality closed-cell neoprene foam with strong pressure-sensitive adhesive for reliable bonding to metals, plastics, glass, and painted surfaces.

Product Overview

Black neoprene foam tape is a flexible sealing and cushioning material used to create airtight and watertight seals between surfaces. The closed-cell structure of neoprene provides excellent resistance to moisture, dust, vibration, and temperature variations.

The threaded adhesive backing allows quick installation and strong surface bonding without the need for additional mechanical fasteners. The tape is commonly used in HVAC sealing, panel mounting, automotive applications, industrial enclosures, and insulation systems.

Canco Fasteners supplies neoprene foam tapes in multiple widths, thicknesses, and roll lengths to support OEM manufacturing, distributor supply chains, and export packaging requirements.

Quick Specifications

Material

Closed-cell neoprene foam

Adhesive Type

High-strength pressure-sensitive adhesive (PSA)

Colour

Black

Thickness Options

Available in multiple thicknesses depending on sealing and cushioning requirements.

Width Options

Available in various widths to suit industrial and construction applications.

Roll Length

Standard and custom roll lengths available upon request.

Customisation Availability

- Custom widths and thicknesses
- Special adhesive grades
- Die-cut shapes or strips
- Private-label packaging
- Bulk export packaging

Technical Specification Sheet

Black Neoprene Foam Tape – Technical Data

Product Description

Flexible foam tape designed to provide sealing, insulation, vibration dampening, and cushioning between surfaces. The adhesive backing enables quick installation while maintaining strong adhesion.

Material Composition

Closed-cell neoprene foam structure offering resistance to water, air leakage, dust, and weather exposure.

Adhesive Properties

Pressure-sensitive adhesive provides strong bonding to metal, plastic, glass, and painted surfaces. Designed for easy peel-and-stick application.

Manufacturing Process

- Foam sheet production
- Precision slitting into required widths
- Adhesive coating and protective liner application
- Roll winding and quality inspection

Dimensional Control

Manufactured to specified width, thickness, and length tolerances according to industrial requirements or approved customer specifications.

Testing & Inspection

- Dimensional verification
- Adhesion performance testing

Visual inspection
Material quality checks

Typical Applications

HVAC duct sealing
Electrical and industrial panel sealing
Automotive insulation and vibration dampening
Door and window sealing
Industrial equipment cushioning

Export & Packaging

Available in:
Standard rolls
Custom roll lengths
Private-label cartons
Bulk export packaging

Canco Fasteners supplies neoprene foam tape for OEM manufacturing, industrial distributors, and containerised export shipments.
