

L PATTI CLAMP

Short Description

L Patti Clamp is a robust L-shaped metal bracket designed for structural support and fastening applications. It provides strong and stable fixing for panels, frames, and support structures.

Product Overview

The L Patti Clamp is manufactured using high-quality steel and formed into an L-shape with precision holes for fastening. It is widely used in construction, fabrication, and industrial installations where right-angle support is required. Manufactured by Canco Fasteners with strict quality control standards.

Quick Specifications

Material Options:

- Carbon Steel
- Stainless Steel (SS 304 / SS 316)
- High Tensile Steel

Surface Finish:

- Zinc Plated
- Hot Dip Galvanised
- Powder Coated (optional)
- Plain / Self Finish

Size Range:

Available in various thicknesses and dimensions as per requirement (custom sizes available)

Standards:

Manufactured as per industry standards or customer-approved drawings

Technical Specification

Components:

- L-Shaped Clamp Body
- Pre-drilled Holes for Fastening

Manufacturing Process:

- Sheet metal cutting
- Bending/Forming
- Hole punching / drilling
- Surface finishing

Testing & Inspection:

- Dimensional inspection
- Hole alignment verification
- Surface quality inspection
- Load testing (on request)

Applications

- Structural support systems
- Cladding and panel fixing
- Frame installations
- Industrial fabrication
- Construction and infrastructure projects

Installation Note

Align the clamp at the required position and secure using appropriate fasteners through the provided holes. Ensure proper tightening for maximum stability.

Packaging & Supply

Available in bulk cartons, palletised loads, and export packaging. Custom branding and private labeling available.
