

RUBBER CLAMP

Short Description (Beside Product Image)

Rubber clamps are designed for secure fastening and support of pipes, tubes, cables, and conduits while providing vibration and noise reduction. Manufactured with a metal clamp body and protective rubber lining to prevent damage to the mounted component and provide anti-slip support.

Product Overview

Rubber clamps are widely used for fixing pipes, cables, and hoses in industrial, automotive, HVAC, plumbing, and construction installations. The rubber lining absorbs vibration, reduces noise, and protects the surface of the pipe or cable from abrasion.

Canco Fasteners manufactures rubber clamps in multiple sizes suitable for different pipe and cable diameters. Products can be manufactured to international standards or according to customer drawings for OEM supply, distributors, and export markets.

Quick Specifications

Material Options

- Carbon Steel
- Stainless Steel (AISI 304)
- Stainless Steel (AISI 316)

Rubber Lining

- EPDM Rubber
- PVC Rubber
- Neoprene Rubber (optional)

Surface Finish Options

- Electro-Galvanised (Zinc Plated)
- Hot-Dip Galvanised
- Plain / Self-colour
- Passivated (for stainless steel)

Size Range

Available in a wide range of sizes to suit various pipe, tube, and cable diameters. Custom dimensions available based on drawings or project requirements.

Customisation Availability

- Custom dimensions
- Special rubber materials
- Surface coating options
- Private-label packaging
- Bulk export supply

Technical Specification Sheet

Product Description

Mechanical clamp with protective rubber lining designed to secure pipes, cables, and hoses while reducing vibration and preventing surface damage.

Components

- Metal clamp body
- Rubber lining
- Fastening bolt and nut

Manufacturing Process

- Steel strip forming
- Rubber lining bonding
- Threaded fastener assembly
- Surface coating and finishing

Material Grades

- Mild / Carbon Steel

- Stainless Steel 304
- Stainless Steel 316

Surface Finishes

- Zinc plated
- Hot-dip galvanised
- Passivated stainless steel

Dimensional Control

Manufactured to precise dimensional tolerances according to standard specifications or approved customer drawings.

Testing & Inspection

- Dimensional inspection
- Surface finish inspection
- Rubber bonding quality check
- Material certification available upon request (EN 10204 3.1)

Typical Applications

- Pipe and tube fixing
- Cable and conduit support
- Automotive hose mounting
- HVAC installations
- Industrial equipment mounting

Export & Packaging

Available in:

- Bulk cartons

- Palletised loads
- Private-label cartons
- Container export quantities

Canco Fasteners manufactures rubber clamps strictly according to approved standards or customer drawings. Products are available for OEM supply, distributor networks, and export shipments.
