

SCAFFOLDING CLAMP

Short Description

Heavy-duty Scaffolding Clamp designed for secure fastening of scaffold tubes. Provides strong grip, durability, and safety in construction and industrial scaffolding systems.

Product Overview

The Scaffolding Clamp is a robust coupling device used to connect scaffold tubes at various angles. It ensures rigid connections and structural stability in scaffolding frameworks. Manufactured by Canco Fasteners, it is suitable for construction, infrastructure, and industrial applications, including OEM and export supply.

Quick Specifications

Material Options:

- Forged Steel
- Carbon Steel

Surface Finish:

- Zinc Plated (Yellow / White)
- Hot-Dip Galvanised

Size Range:

Suitable for standard scaffold tubes (48.3 mm OD)

Standards:

Manufactured as per EN / BS standards or customer specifications

Customisation:

- Branding & marking
- Surface coating
- Packaging options

Technical Specification Sheet

Product Description:

Heavy-duty clamp for connecting scaffold tubes securely

Components:

- Clamp Body (Forged)
- T-Bolt

- Nut & Washer

Manufacturing Process:

- Drop forging
- Machining
- Thread rolling
- Surface finishing

Material Grades:

- Carbon Steel
- Forged Steel

Surface Finishes:

- Zinc Plated
- Hot-Dip Galvanised

Testing & Inspection:

- Dimensional inspection
- Load testing
- Visual inspection

Applications:

- Scaffolding systems
- Construction sites
- Industrial maintenance platforms

Installation Note:

Position clamp over scaffold tubes and tighten bolt securely to ensure firm grip and safety.

Packaging:

- Bulk bags
- Cartons
- Palletised loads
